                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity, inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and

      The invention relates to human polynucleotides (AAI79941-AAI93841) and the encoded proteins (AA000010-AA013910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activiny inhibin activity and may be useful in the diagnosis and/or activity inhibin activity and may be useful in the diagnosis and/or activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activiny inhibin activity and may be useful in the diagnosis and/or

                                                                                                                                                                             The invention relates to human polynucleotides (AAI79941-AAI93841) and the encoded proteins (AA000010-AA013910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, hammatopolesis regulating activity, tissue growth factor activity, hammatopolesis regulating activity, tissue growth factor activity. The diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and
                                                               Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; cytokine; cell proliferation; cell differentiation; gene therapy; vaccine; peptide therapy; stem cell growth factor; haematopoiesis; tissue growth factor; immunomodulatory; cancer; leukaemia; nervous system disorders; arthritis; inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Isolated nucleic acids and polypeptides, useful for preventing diagnosing and treating e.g. leukaemia, inflammation and immuno
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    WPI; 2001-514838/56

OF FEMALE LINE CELLS. PLAYS A ROLE IN GERM LINE SEX DETERMINATION.

SUBCELLULAR LOCATION: Nuclear (Potential).

SUBCELLULAR LOCATION: Nuclear (Potential).

DEVELOPMENTAL STAGE: FIRST APPEARS IN THE GERMARIUM AND ACCUMULATES IN NURSE CELLS DURING OOGENESIS. STORED IN THE EGG BUT IS RAPIDLY LOST IN THE EMBRYOS EXCEPT FOR ITS CONTINUED PRESENCE IN THE GERM LINE PRECURSOR POLE CELLS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 melanogaster (Fruit fly)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    "Isolation, regulation, and DNA-binding properties of three
and Drosophila nuclear hormone receptor superfamily members.";
RL Proc. Natl. Acad. Sci. U.S.A. 92:10604-10608(1995).
C. -i- FUNCTION: BINDS TO NGFI-B RESPONSE ELEMENTS. PLAYS AN IMPORTANT
C. -I- SUBBUNIT: FORMS A HETERODIXER WITH USP.
C. -i- SUBGELLULAR LOCATION: NUCLEAR
C. -i- SUBGELLULAR LOCATION: NUCLEAR
C. -i- ALTERNATIVE PRODUCTS: 2 ISOFORMS: A LONG FORM (SHOWN HERE) AND A
C. SHORT FORM; ARE PRODUCED BY ALTERNATIVE SPLICING.
C. -i- TISSUE SPECIFICITY: UBIQUITOUSLY EXPRESSED IN PREBLASTODERM
C. -i- TISSUE SPECIFICALLY IN CENTRAL NERVOUS SYSTEM AND INTESTINAL
C. TRACT. HIGHLY EXPRESSED IN THIRD INSTAR LARVAL IMAGINAL DISKS AND
C. BRAIN COMPLEXES, BUT NOT IN OVARIES.
C. HIGHER IN LATE EMBRYOGENESIS AND DURING LARVAL AND PUPAL STAGES.
C. SHORT ISOFORM IS ENRICHED IN PUPAE AND ADULTS, LONG ISOFORM IN

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                         Score

10-NOV-2000 (first entry) Soluble peptide antigen pEA

```
pEA peptide; cytostatic; vaccine; cytotoxic T cell; CTL; immunotherapy; major histocompatibility complex class 1; MHC class 1; antigen; tumour; prostate; breast; multiple myeloma.

Unidentified.

W0200035949-A1.

22-JUN-2000.

14-DEC-1999; 99WO-US29724.

14-DEC-1998; 98US-0112324.

(DEND-) DENDREON CORP.

Laus R, Hakim I, Vidovic D;
```

Antigens modified by the covalent addition of a peptide that facilitates entry into antigen presenting cells, useful for producing compositions for immunizing against tumors and pathogens -  $\frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \int_$ 

WPI; 2000-442365/38.

                                                                                                                    The present invention relates to compositions of modified soluble protein antigens capable of eliciting an enhanced in vivo cytotoxic T cell (CTL) response i.e. a major histocompatability complex (MHC) class I molecule response. The protein antigen is modified by the covalent addition of a peptide sequence which facilitate entry of the antigen into antigen peptide sequence which facilitate entry of the antigen into antigen sequence which can be used to modify the soluble antigens. The present sequence is tandem pEA/ pK peptide conjugate. The modified antigen composition may be used for immunising against, or treating a tumour e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Antigens modified by the covalent addition of a peptide that facilitates entry into antigen presenting cells, useful for propositions for immunizing against tumors and pathogens -  \frac{1}{2} \int_{-\infty}^{\infty} \frac{1}{2} \left( \frac{1

The protein antigen is modified by the covalent addition of a peptide sequence which facilitate entry of the antigen into antigen a presenting cells (APCS). The present sequence is one such peptide sequence which can be used to modify the soluble antigens. The present sequence is peptide pEA. The modified antigen composition may be used for immunising against, or treating a tumour e.g. prostate and breast carcinoma or multiple myeloma, or pathogen in mammals.
                                                                                                         prostate and

                                                                                                                          capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                        The sequence data for this patent did not form specification, but was obtained in electronic f
                                                                                                                                                                                               The invention relates to an isolated nucleic acid detection reagent
                                                                                                                                                                                                                     Disclosure; SEQ ID NO 41514; 21pp + Sequence Listing; English

The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     30-JUN-2000;
